

Mini Project 5
Due Nov 7, 4:30 pm

For this project you have to work in groups of 3 or 4.

1. Look at our (Stat 801) syllabus, and - other than the topics listed between week 1 and week 14 - find 3 topics related to Statistics that you could introduce to the class in 15 minutes. On the syllabus, for week 15 and 16 I listed some topics that we might not cover in class, so feel free to work with those topics too. When you describe your topics, be specific. For example it is not enough to say that you will introduce some experimental design or multiple regression.
2. For each of the topics write an outline how you would present it. It should not be the whole presentation. You only need to include the key elements/topics you would talk about. The outline for one topic should not be longer than a page.
3. Include why you chose your topics.
